DETAILED ACTION

1. This communication is in response to amendment filed August 13, 2009. Claims 1-3, 5-7, 10-12, 14, 15, and 17-19 are pending. Claims 1, 6, 11, 12, and 18 are amended. Claims 4, 8, 9, 13, 16, 20 and 21 are cancelled.

Response to Arguments

2. Applicant's arguments, see Remarks on pages 9-13, filed August 13, 2009, with respect to claims 1-3, 5-7, 10-12, 14, 15, and 17-19 have been fully considered and are persuasive. The 35 USC 103(a) rejections of claims 1-3, 5-7, 10-12, 14, 15, and 17-19 has been withdrawn.

Allowable Subject Matter

3. Claims 1-3, 5-7, 10-12, 14, 15, and 17-19 are allowed.

4. The following is an examiner's statement of reasons for allowance:

Referring to claim 1, Furlani discloses a data structure tangibly embodied in a computer-readable medium, the data structure preventing access, in a computer system, to a data object stored in a first storage location, the data structure comprising:

- a first lock object, in which an ID of the data object is stored, and in which a link to a storage location of a data object is assigned to the ID, and
- a second lock object, in which the ID is stored, before storing the ID in the first lock object, the second lock object comprising a one dimensional data array of IDs of data objects, wherein

- the ID is deleted from the second lock object after storing the ID in the first lock object, and a software application is prevented from accessing the data object if the ID is stored in the first lock object or the second lock object.

Referring to claim 1, Bak discloses assigning a link to a storage location storing a copy of a data object.

Referring to claim 1, Bak also discloses locking an object by moving a near object into an activation record on an execution stack (Fig. 4, col. 5, lines 16-39; col. 6, lines 15-25).

Referring to claim 1, Lenz discloses a lock object comprising a table with at least two columns, one of the columns storing IDs of data objects.

Neither Furlani taken either alone or in obvious combination disclose all the claimed features of applicant's instant invention, namely:

a first lock object, *in which an ID of the data object is stored by a first process moving the data object from the first storage location to a second storage location, and in which a link to the second storage location storing a copy of the data object is assigned to the ID, the first lock object comprising a table with at least two columns, a first column for storing IDs of data objects and a second column for storing links to copies of the data objects in the second storage location; and*

a second lock object, in which the ID is stored by the first process performing an action on the data object before storing the ID in the first lock object or before assigning

Art Unit: 2159

the second storage location to the ID in the first lock object, the second lock object comprising a one-dimensional data array of IDs of data objects, wherein:

the first process deletes the ID from the second lock object after storing the ID in the first lock object or after assigning the second storage location to the ID in the first lock object, and a second process is prevented from accessing the data object if the ID is stored in the first lock object or the second lock object by the first process.

Also, there is no motivation to combine Bak or Lenz to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Claims are 11 and 12 similar to claim 1 and are therefore also allowed.

Claims 2, 3, 5-7, 10, and 14, 15, and 17-19 depend from claims 1, 11 and 12 and are therefore also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
